This page shows new items to be added 7.30.11

One of the biggest problems with gold and silver, is that they both stain very easily. It is easy to smudge or strain gold and silver and for this reason jewelry of these materials needs to be handled very carefully and polished often. The same attention to detail is not a requirement with stainless steel and this makes it appealing to a number of different people. Stainless steel jewelry will last quite a bit longer than its gold or silver counterparts. This is a bigger return on investment.
